TI - Extn. of ethereal oils - involves treating crude with steam, followed by
adsorption of oil in molten wax obtd. from same crude material
AB - SU1532577 Ethereal oil is extracted from crude more efficiently when
molten wax obtd. from the same crude material is used as adsorbent. The
crude is steamed, and ethereal oil adsorbed on the molten wax from the
steam-gas mixt. Subsequent desorption yields the product.
- ADVANTAGE - Increased quality and yield of product. Bul.48/30.12.89 (2pp
